

Paddock Spraying & Maintenance

We offer a paddock spraying and maintenance service to farmers, livery stables, stud farms and horse owners to rid their paddocks of noxious weeds such as ragwort, dock, nettle, thistle etc. We use a state of the art computerised quad bike system with a 6m boom. The very low ground pressure tyres leave less marks than a human foot so ground damage is eliminated and we can treat areas that conventional sprayers cannot. The bike only needs 48 inches of access so narrow gates and gardens are no problem. We can spray any area from half an acre upwards. We also offer fertilising and chain harrowing to improve existing paddocks or do a full re-seeding job if required.

You can find more information on Ragwort, Japanese Knotweed, Giant Hogweed and the herbicides we use to control on our Useful Documents page at www.millwardforestry.co.uk

Bracken spraying

Bracken is an invasive and poisonous plant. It can quickly colonise and take over land if not controlled. Each year we spray around 600 acres for a range of clients including The Ministry of Defence and The National Trust. We have specialised in bracken spraying for many years and were probably the first company to start using mistblowers for bracken control. We can also spray with a quad bike if ground conditions permit. Mistblowers ensure excellent canopy penetration and we have achieved great results with them. The herbicide of choice is Asulox or Brack-N. (Different manufacturers, same product) It is a very specific herbicide affecting only Bracken and Docks and so can be applied where Bracken is taking over new tree planting or heathland areas. We guarantee an 80% success rate with bracken spraying although follow up spraying the next season may be required where Bracken density is very high. Bracken has a very small window of opportunity for spraying, generally from the beginning of July to mid August. If you are planning to carry out bracken control please book it in early as we get very busy during this period.

You can find more information on the herbicide we use to control bracken on our Useful Documents page at www.millwardforestry.co.uk
